

- ✓ Maximize growth & yield
- ✓ Plant phase specific additives
- ✓ Increases yield, fruit size & flavor

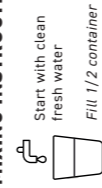

## GROW GUIDE

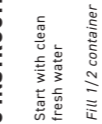

PRODUCT	LEAFY GREENS		FLOWERING & FRUITS	
	SEEDLING	VEGETATIVE GROWTH	FLOWERING	FRUITING
Raíces	0,5 - 1 ml/L	0,5 - 1 ml/L		
Fertilizante Universal	1 ml/L	1-5 ml/L	1-5 ml/L	1-5 ml/L
Calcio y Magnesio	0,1 ml/L	0,1-1 ml/L	0,1-1 ml/L	0,1-1 ml/L
Plantas de Flor	Do not use together with Fertilizante Universal during flowering & fruiting		1-5 ml/L	1-5 ml/L
Floración			0,5 - 1 ml/L	0,5 - 1 ml/L
Desarrollo y Maduración				0,25 - 0,5 ml/L

### MIXING INSTRUCTIONS:

Start with clean fresh water

Fill 1/2 container

Mix in Product X & stir well

Mix in Product Y & stir well

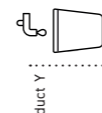

Fill container with the rest of the clean fresh water

Water plants

## Raíces

Raíces is a nutritional supplement for the root development phase of all types of plants, from vegetables to ornamentals.

It contains phosphorus, humic acids and plant extracts, compounds naturally present in the soil that participate in mineral absorption and metabolic processes during root growth.

### APPLICATION AND USE:

Add Raíces as part of the usual nutrient solution. It can be used in any growing system or plant type, especially in the early stages, after transplanting or when taking cuttings. Apply 1 ml of Raíces per litre of irrigation water.

AVAILABLE IN 250ML, 500ML & 1L

## Calcio y Magnesio

Calcium and Magnesium is a mineral additive that provides these two essential secondary nutrients, along with iron. Calcium strengthens cell walls, while magnesium supports photosynthesis and light energy absorption.

Ideal for crops grown with soft, rain or demineralised water, and as a supplement to any fertilisation plan.

### APPLICATION AND USE:

Add to irrigation water when it needs to be enriched with calcium and magnesium or as an additional boost to regular fertilisation programmes. It is recommended to use water at room temperature (21 °C). Apply 0.1-1.0 ml of Calcium and Magnesium per litre of nutrient solution.

AVAILABLE IN 250ML & 1L

## Floración

Floración is a supplement designed for the initial flowering phase. Its formula contains humic acids and plant extracts; natural compounds present in the soil that participate in nutrient absorption and general plant metabolism.

### APPLICATION AND USE:

Add to irrigation water at the beginning of flowering, in combination with Fertilizante Universal or Plantas de Flor, as part of the usual cultivation plan. It can be used on all types of ornamentals, horticultural and fruit crops. Apply 0.5-1 ml per litre of irrigation water. Use daily before and during the flowering phase.

AVAILABLE IN 500ML & 1L

## Fertilizante Universal

Fertilizante Universal is a complete mineral fertilizer with an NPK ratio of 2-3-5, enriched with essential trace elements such as boron, molybdenum, manganese, zinc, and iron.

It provides the nutrients necessary for balanced and healthy growth in all types of crops, from vegetables to ornamental plants, when using tap water or growing in calcareous soils.

### APPLICATION AND USE:

It is used dissolved in irrigation water as a base nutrient. Apply 2.5-5 ml of Fertilizante Universal per litre of irrigation water.

AVAILABLE IN 500ML & 1L

## Plantas de Flor

Plantas de Flor is a complete mineral fertiliser formulated for the flowering phase. It contains phosphorus, potassium and other essential nutrients that plants naturally use during the development of flowers and fruits.

Suitable for ornamental, horticultural and fruit plants in the flowering phase.

### APPLICATION AND USE:

Easily soluble in water and can be used in all types of irrigation systems. Recommended for light soils with calcium, as well as for potted or garden plants. Apply 1-5 ml of Plantas de Flor per litre of water (1:200).

AVAILABLE IN 500ML & 1L

## Desarrollo y Maduración

Desarrollo y Maduración is a fertiliser for the final stage of flowering and maturation. It contains phosphorus and potassium in a specific ratio (PK), nutrients that plants naturally use during the development of flowers and fruits.

Phosphorus is involved in energy transfer within the plant, while potassium regulates water movement in cells, contributing to the proper firmness of flowers and fruits.

### APPLICATION AND USE:

It can be used in conjunction with other fertilisers as part of your regular fertilisation plan. Suitable for soils, hydroponics and coco substrates, as well as all types of irrigation systems. Compatible with all ornamentals, horticultural and fruit crops. Apply 0.25-0.50 ml of Desarrollo y Maduración per litre of nutrient solution (1:4000).

AVAILABLE IN 250ML & 1L
